

INTRODUCTION TO COMPUTER PERIPHERALS

what is computer peripheral

computer peripheral device is connected to computer and its helps to add more functions and work faster

like printer-helps to printout

scanner-converts paper documents into digital files

webcam helps-to capture videos

TASK-1 PRINTERS,SCANNERS&WEBCAMS

1.PRINTER

printer takes digital content inside and outputs physical content

- REAL-LIFE-EXAMPLE-> YOU HAVE PDF IN YOUR PC->YOU GIVE IT TO PRINTER->PRINTER GIVES YOU PAPER OUTPUT

TYPES OF PRINTER

1.INKJET

Inkjet uses ink drops to printout

Uses liquid ink

And its good for colour documents and photos

2.LASER

Its uses laser-based imagine and toner

and this good for clear document printing

3.THERMAL

It uses heat-sensitive paper

Its commonly uses for bills&receipts

2.Scanner

Scanner does almost the opposite of printer

Scanner covert paper documents into digital file

Example: paper certificate->scanner->pdf

1.Flatbed Scanner

In flatbed scanner it scans on glass surface

use-in:certificates,photos and important documents

2.Sheet-fed Scanner

in **Sheet-fed Scanner** its automatically feeds paper

use-in: to scan multiple pages quickly

3.WEBCAM

webcam is basically camera device its captures live video through computer

EXAMPLE: Webcam ->Computer->video call&Live stream

Built-in-webcam

in new laptops and monitors comes Built-in-webcam

use: online classes&video calls

USB External Webcam

its an external camera its connects with USB in computer

use: Online meetings &online video stream

3.REAL-LIFE-EXAMPLE

1.Printer:Documents,invoices or print reports

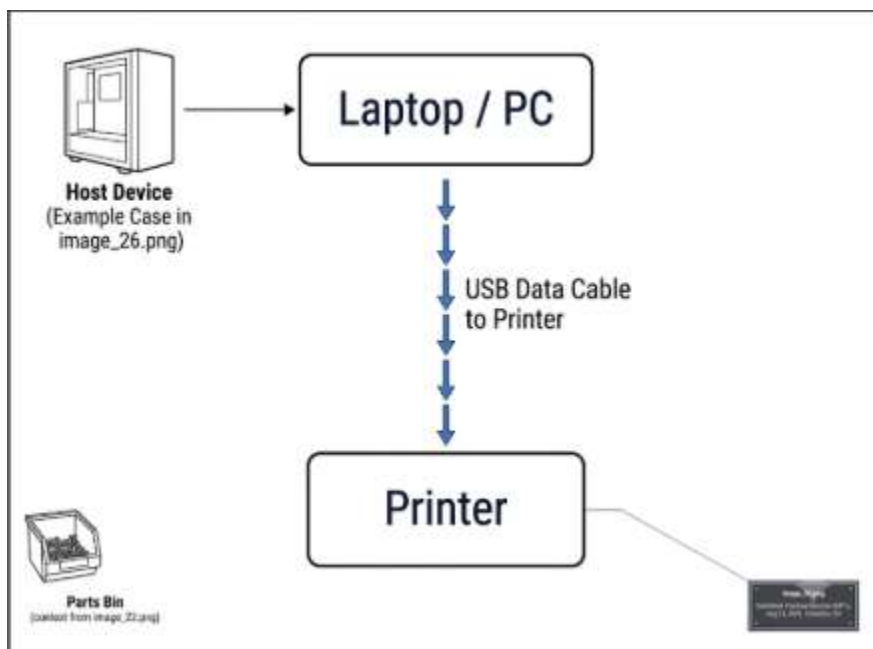

2.Scanner:paper documents into->digital files & pdf

3.Webcam:Streaming on discord&Youtube

TASK 2 – LABELLED PRINTER CONNECTION DIAGRAM

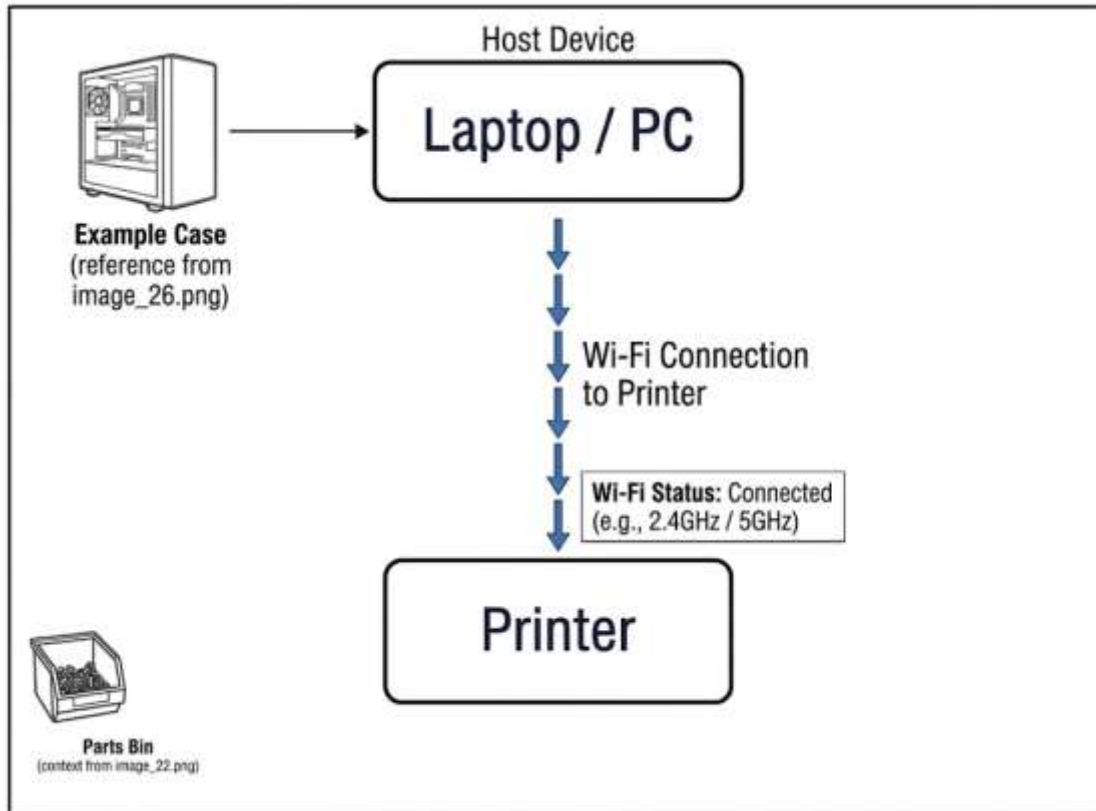

What should my diagram shows:

1. USB connection:printer Directly connects with PC via USB

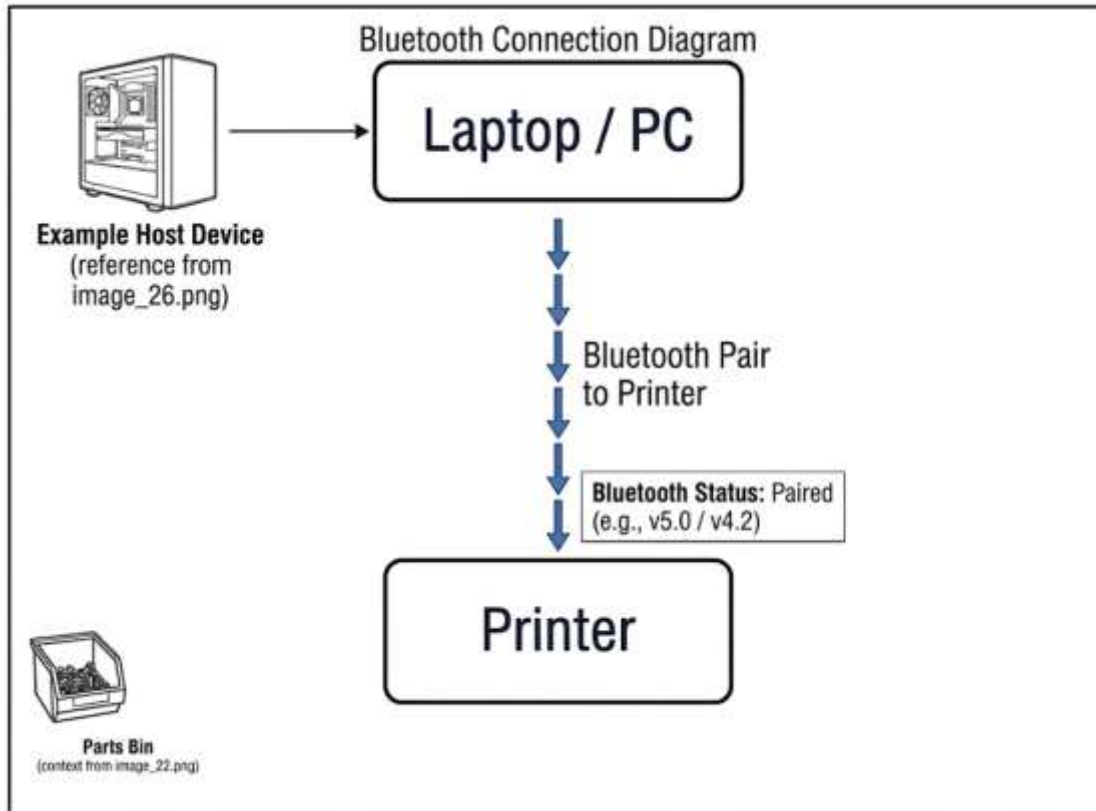

2. Wi-Fi Connection

The printer connects through wireless network

3. Bluetooth Connection

A compatible printer can connect wirelessly to a nearby computer using Bluetooth

TASK 2 – LABELLED PRINTER CONNECTION DIAGRAM

Printer connection diagram:

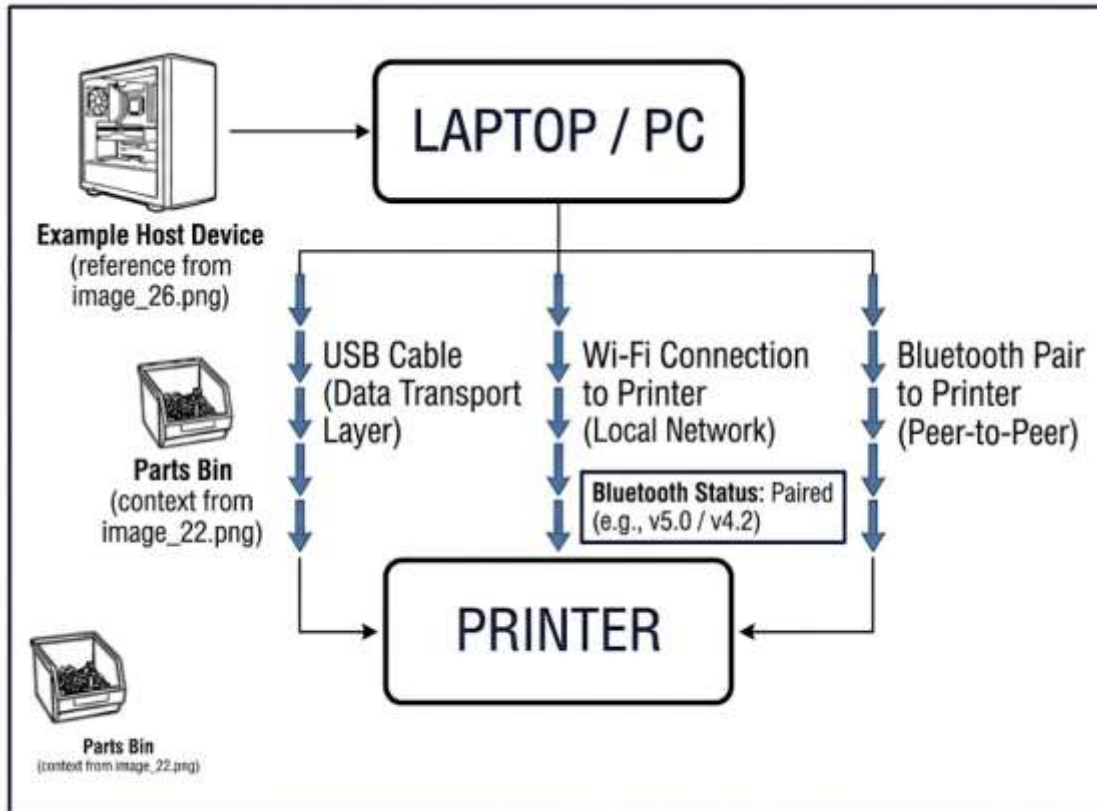

diagram 1: Connection Between a Computer and Printer

TASK 3 – CONNECTION INTERFACES

Listing three connection interfaces used to connect peripherals, such as USB, Wi-Fi and Bluetooth, and explain one advantage and one disadvantage of each

1. USB – Universal Serial Bus

USB is a wired connection interface used to connect peripherals directly with a computer

Example: Laptop → USB Cable → Printer

Advantage: USB connection stay genrally stable and reliable

Disadvantage:it requires physical cable

2. Wi-Fi

Wi-Fi is a wireless network connection that allows compatible peripherals to communicate through a wireless network

Example:Laptop → Wi-Fi Network → Printer

Advantage:multiple device can use it without cable

Disadvantage:Its reqires stable network configuration

3. Bluetooth

Bluetooth is a short range wireless technology used to connect

Example:Laptop-->Bluetooth->Printer

Advantage:its not requires cable so its convenient for nearby 30m devices

TASK-3 QUICK COMPARISON

Interface	Connection	Advantage	Disadvantage
USB	Wired	Stable & reliable	Cable required
Wi-Fi	Wireless network	Multiple devices can connect	Network setup required
Bluetooth	Short-range wireless	No cable required	Limited range

TASK 4 – CONNECTING A USB PRINTER TO A COMPUTER

Pick one peripheral device and write step-by-step instructions for connecting it to a computer

1. Prepare the Printer

put the printer near computer and connect power cable and make sure paper and ink/toner are available

2. Switch ON the Printer

Turn on the printer and until it's ready

3. Connect the USB Cable

Connect one end of the usb cable to printer and other end to an available USB port on computer

Computer → USB Cable → Printer

4. Check Device Detection

After USB connects computer detect automatically the printer

5. Install the Driver

If required, install the correct printer driver so that the computer can communicate with the printer

Open the printer settings on the computer.

Path:Settings → Printers & Scanners

7. Select the Printer

Find and select connected printer from the list

8.Test Print

Print one test document and check printer works properly or not

9.Output

check the printed page text is clear or not ,alignment is correct or not and any printing problem or not

CONCLUSION

What I Learned

In this assignment, I learned about computer peripherals and their basic functions. I learned that peripherals are devices connected to a computer to add more functions.

I studied printers, scanners and webcams. Printer is used to print digital content on paper, scanner converts paper documents into digital files, and webcam is used to capture live video.

I also learned about USB, Wi-Fi and Bluetooth connection interfaces and how they are used to connect peripherals with a computer.

Finally, I learned the step-by-step process of connecting a USB printer to a computer and how peripherals can also be important from a basic cybersecurity point of view.
