

DAY 5 – OPERATING SYSTEM INFORMATION, INSTALLATION & SETTINGS

Course: Diploma in Cyber Security
**Topic: Operating System Information,
Windows, Linux, macOS Installation
and OS Settings**

Name: HET ACHARYA

TASK 1 – SYSTEM INFORMATION

What does Task 1 ask?

Open **System Information** on your Windows laptop/PC and take a screenshot showing the **OS version, processor and RAM**

Item	Value
OS Name	Microsoft Windows 10 Pro
Version	10.0.19045 Build 19045
Other OS Description	Not Available
OS Manufacturer	Microsoft Corporation
System Name	DESKTOP-5FNJ39J
System Manufacturer	Default string
System Model	Default string
System Type	x64-based PC
System SKU	Default string
Processor	Intel(R) Core(TM) i5-10400F CPU @ 2.90GHz, 2904 Mhz, 6 Core(s), 12 Logical ...
BIOS Version/Date	American Megatrends Inc. , 9/24/2024
SMBIOS Version	3.2
Embedded Controller Version	255.255
BIOS Mode	UEFI
BaseBoard Manufacturer	Default string
BaseBoard Product	H510
BaseBoard Version	Default string
Platform Role	Desktop
Secure Boot State	Off
PCR7 Configuration	Elevation Required to View
Windows Directory	C:\Windows
System Directory	C:\Windows\system32
Boot Device	\Device\HarddiskVolume1
Locale	United States
Hardware Abstraction Layer	Version = "10.0.19041.6456"
User Name	DESKTOP-5FNJ39J\br-16
Time Zone	Pacific Daylight Time
Installed Physical Memory (RAM)	16.0 GB
Total Physical Memory	15.8 GB

TASK 2 – CREATE A BOOTABLE LINUX USB

What does Task 2 ask?

Download an official Linux ISO such as **Ubuntu** or **Fedora** and use **Rufus** or **BalenaEtcher** to create a bootable USB drive.

Steps:

1. Download an official **Ubuntu/Fedora ISO**.
2. Connect a suitable USB drive.
3. Open **Rufus** or **BalenaEtcher**.
4. Select the downloaded Linux ISO.
5. Select the USB drive.
6. Start the process.
7. Wait until the bootable USB is created.

Ai genrated

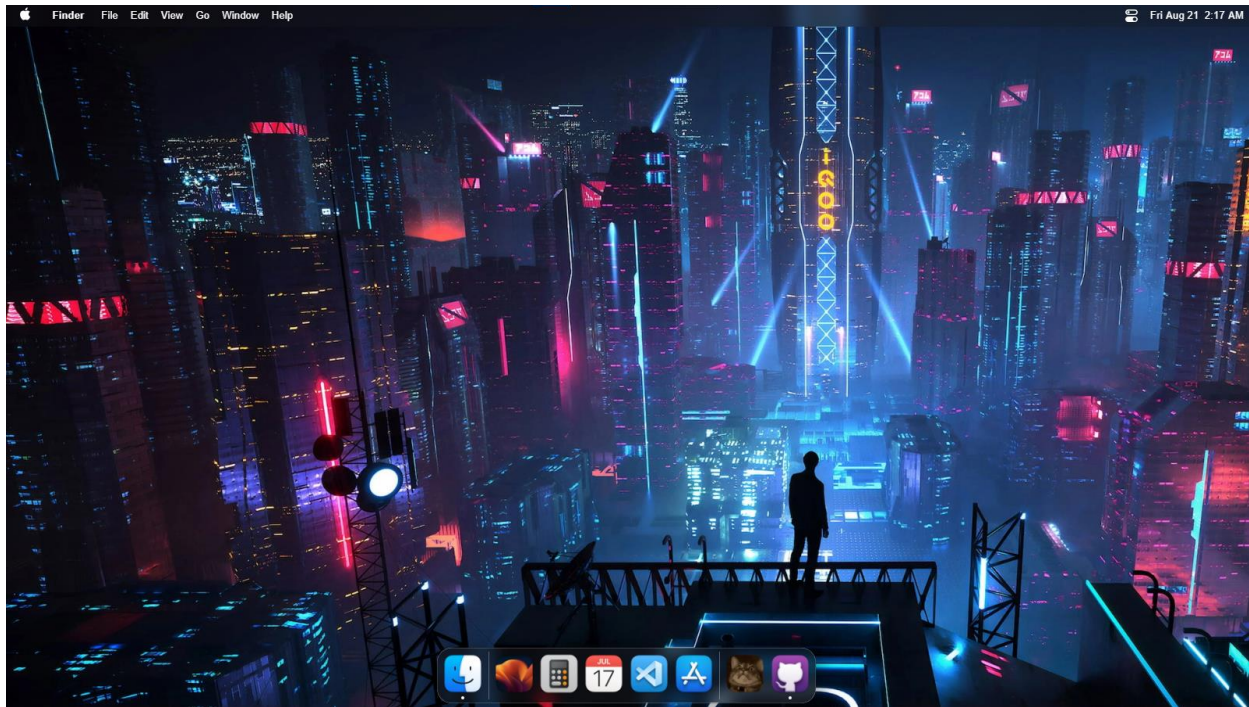

Figure 2: Creating a bootable Linux USB using an ISO image

TASK 3 – macOS SETTINGS

On a macOS device or macOS virtual machine, change the **desktop wallpaper** and change the **system language to Hindi or Gujarati**.

Part 1 – Change Wallpaper

Open the desktop/wallpaper settings and select a new wallpaper.

Part 2 – Change Language

Open **System Preferences → Language & Region** and add/select Hindi or Gujarati

TASK 4 – UBUNTU USER ACCOUNT

Install Ubuntu and create a new user account named **“gamer”**. Then enable automatic login for this user and take a screenshot of the login screen showing the username.

Steps:

1. Install Ubuntu on a real PC or virtual machine.
2. Create a new user.
3. Enter username:
gamer
4. Complete the Ubuntu installation.
5. Open user/login settings.
6. Enable **Automatic Login** for the gamer user.

7. Restart/log out.
8. Check the login screen.
9. Take a screenshot showing the username.

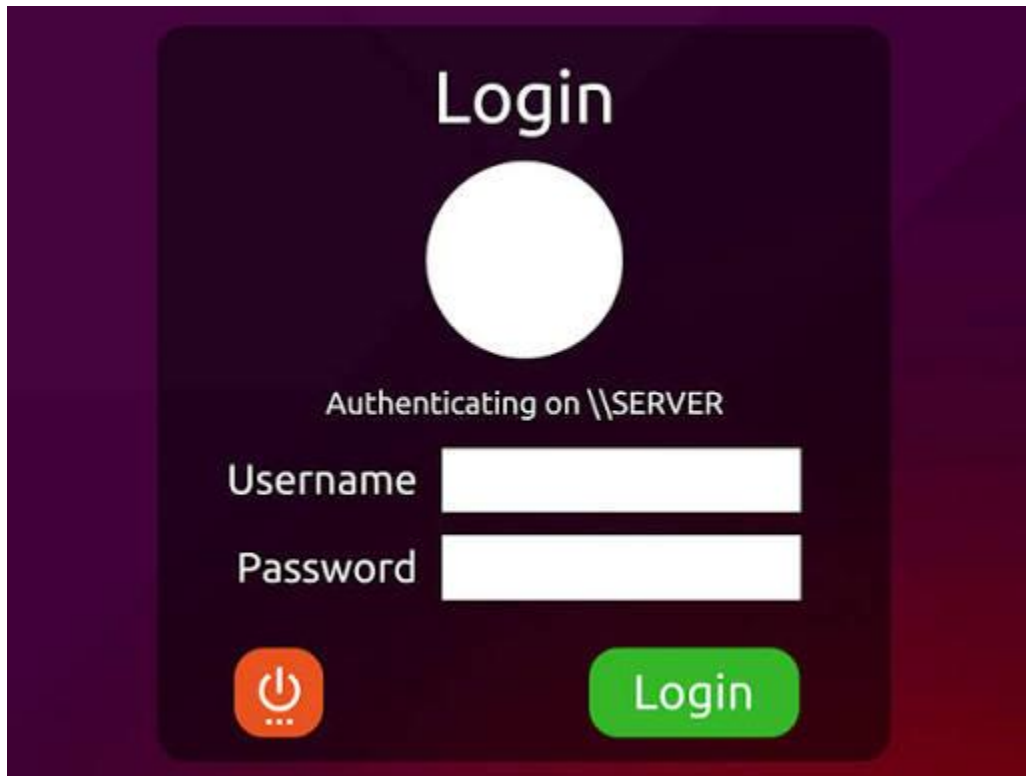

Figure 4: Ubuntu login screen showing the gamer username

TASK 5 – WINDOWS 10 INSTALLATION GUIDE

Use ChatGPT to generate a step-by-step guide for installing Windows 10, including partitioning tips and post-installation privacy and update settings. Follow the guide and note anything that was unclear or missing.

1. Windows 10 installation media prepare karna.
2. Laptop/PC ko installation media se boot karna.
3. Language and keyboard select karna.
- 4 Windows installation start karna.
5. Installation drive/partition select karna.
6. Partitioning carefully karna.
7. Installation complete hone dena.
8. User account setup karna.
9. Windows updates check karna.
- 10.Privacy settings review karna.

Important Partitioning Tip:

Before changing or deleting partitions, make sure important data is backed up.

TASK 5 – UNCLEAR / MISSING STEPS

After following the Windows 10 installation guide, I found that most of the steps were clear and easy to understand. However, the **partitioning step** needed more explanation because selecting the wrong partition can delete important data.

I also felt that the guide could explain **which partition should be selected for Windows installation** and what should be done with existing partitions.

My Observation:

The guide was mostly clear, but the partitioning section needed more detailed explanation. I learned that I should check the correct drive and take a backup before making any changes to partitions.

CONCLUSION

In this assignment, I learned about **operating system information, installation and basic OS settings**.

I learned how to check Windows system information such as the **OS version, processor and RAM**. I also learned how to create a **bootable Linux USB** using a Linux ISO and a tool such as Rufus or BalenaEtcher.

I also learned about changing basic settings in **macOS**, including the desktop wallpaper and system language. In Ubuntu, I learned how to create a new user account and configure automatic login.

Finally, I learned the basic steps involved in **Windows 10 installation**, including partitioning, privacy settings and Windows updates.

Overall, this assignment helped me understand the basic installation, configuration and management of different operating systems.
